CORPORATE TRAINING DELIVERY REPORT

Python with AI Bootcamp

From Python Fundamentals to AI Application Development

Prepared by: Narapa Reddy Laxmi Prasanna

Designation: Technical Trainer / Python & AI Trainer

Training Organization: Shaivika Groups

Training Program: Five-Day Python with AI Bootcamp

Training Period: 28/09/2026 – 02/10/2026

Training Mode: Online

Target Audience: College Students

REPORT PURPOSE

This report documents the curriculum, technical topics, practical exercises, daily tasks, project activities, learning objectives, and supporting evidence associated with the five-day Python with AI Bootcamp.

It serves as a professional record of the training delivered and demonstrates the trainer's technical expertise, instructional approach, and practical training activities.

SHAIVIKA
GROUPS

EXECUTIVE SUMMARY

The Python with AI Bootcamp was a five-day technical training program designed to introduce participants to Python programming, data analysis, machine learning, Generative AI, and AI-powered application development.

The program followed a progressive learning structure, beginning with Python fundamentals and advancing toward practical AI application development. The training incorporated conceptual explanations, coding demonstrations, programming exercises, and project-based activities.

Key Training Areas

- **Day 1:** Python programming fundamentals and problem-solving.
- **Day 2:** Data analysis, data visualization, file handling, and automation.
- **Day 3:** Machine learning concepts, algorithms, and model evaluation.
- **Day 4:** Generative AI, prompt engineering, and API integration.
- **Day 5:** Interactive AI application development, Git, GitHub, and deployment concepts.

Training Approach

The sessions emphasized practical learning through coding examples, exercises, demonstrations, and application use cases.

The curriculum explored potential applications such as student performance analysis, data dashboards, predictive modeling, resume analysis, study assistance, and interview preparation.

Report Objective

This report provides a structured record of the training curriculum, day-wise activities, task references, practical exercises, project evidence, and learning outcomes.

It is intended to support professional documentation of the training delivered and demonstrate the trainer's technical and instructional capabilities.

Task Website: https://www.kqeannouncements.xyz/

Note: *Final outcomes and project completion claims should reflect the activities actually delivered.*

SHAVIKA GROUPS

TRAINER PROFILE

Professional Introduction

Narapa Reddy Laxmi Prasanna is a Technical Trainer specializing in Python programming and Artificial Intelligence. The training approach focuses on explaining technical concepts, demonstrating practical implementations, and connecting programming knowledge with real-world applications.

The five-day Python with AI Bootcamp was structured to introduce participants to programming, data analysis, machine learning, Generative AI, and AI application development.

Technical Expertise

- Python programming fundamentals
- Data structures, functions, and exception handling
- File handling and structured data processing
- NumPy and Pandas
- Data visualization using Matplotlib
- API integration and automation
- Machine learning using Scikit-learn
- Generative AI and prompt engineering
- AI API integration
- Application development using Streamlit
- Git and GitHub fundamentals
- Application deployment concepts

Professional Details

Name: Narapa Reddy Laxmi Prasanna

Designation: Technical Trainer / Python & AI Trainer

Training Experience: 1 year

Educational Qualifications: B-Tech

GitHub / Portfolio: https://github.com/Laxmi3822

SHAIVIKA GROUPS

TRAINING OVERVIEW

Program Details

Particular	Details
Program Name	Python with AI Bootcamp
Duration	Five days
Training Organization	Shaivika Groups
Trainer	Narapa Reddy Laxmi Prasanna
Training Period	28/09/2026 – 02/10/2026
Training Mode	Online
Target Audience	College students
Programming Language	Python
AI Topics	Machine Learning and Generative AI
Task Website	https://www.kqeannouncements.xyz/

Training Objectives

The primary objectives of the program were to:

1. Introduce participants to Python programming and its applications.
2. Explain variables, data types, control flow, collections, and functions.
3. Introduce data processing, cleaning, analysis, and visualization.
4. Explain machine learning workflows and basic model evaluation.
5. Introduce Generative AI, large language models, and prompt engineering.
6. Demonstrate API integration concepts for AI-powered applications.
7. Introduce interactive application development using Streamlit.
8. Explain version control and project organization using Git and GitHub.
9. Explore practical applications of Python and AI.
10. Encourage problem-solving through coding exercises and project activities.

SHAIVIKA GROUPS

Training Methodology

The training used concept explanations, live coding demonstrations, practical exercises, guided problem-solving, and project-based learning activities.

DAY 1 — PYTHON FUNDAMENTALS

Training Date: 28/09/2026

Topic: Introduction to Python Programming

Daily Task Link: https://www.kqeannouncements.xyz/

Session Overview

The first day introduced participants to Python programming and its role in software development, automation, data analysis, and AI application development.

The session focused on foundational programming concepts and the development of simple programs.

Topics Covered

- Introduction to Python
- Python installation and environment setup
- Variables and data types
- Operators and expressions
- Input and output
- Conditional statements
- For and while loops
- Lists, tuples, sets, and dictionaries
- Functions and parameters
- Introduction to exception handling
- Basic debugging

Practical Exercises

Exercise 1: Student Performance Analyzer

Create a program to accept student marks, calculate totals and averages, and display results based on defined conditions.

Exercise 2: Expense Calculator

Develop a program to record expenses and calculate total expenditure.

SHAIVIKA GROUPS

Exercise 3: Student Result Management System

Use Python collections and functions to organize student details and calculate results.

Daily Task and Evidence

Task Website: https://www.kqeannouncements.xyz/

Learning Outcomes

Participants were introduced to Python syntax, variables, data types, control-flow statements, collections, and functions.

Record the specific outcomes achieved during the actual session.

SHAIVIKA
GROUPS

DAY 2 — DATA ANALYSIS AND AUTOMATION

Training Date: 29/09/2026

Topic: Python for Data Processing, Analysis, and Automation

Daily Task Link: https://www.kqeannouncements.xyz/

Session Overview

The second day focused on using Python to process structured data, perform analytical operations, create visualizations, and understand automation and API fundamentals.

Topics Covered

- List and dictionary comprehensions
- map(), filter(), zip(), and enumerate()
- File handling
- CSV and JSON processing
- Introduction to NumPy
- Arrays and numerical operations
- Pandas Series and DataFrames
- Data cleaning and missing values
- Data filtering and transformation
- Matplotlib visualizations
- API fundamentals
- HTTP requests and responses
- Introduction to automation

Practical Exercises

Exercise 1: Student Data Analysis

Analyze student records and calculate averages and performance summaries using Pandas.

Exercise 2: Data Cleaning Challenge

Identify missing or inconsistent values in a dataset and apply appropriate cleaning techniques.

Exercise 3: Data Visualization

SHAIVIKA GROUPS

Create charts to represent patterns and comparisons in a dataset.

Exercise 4: File Processing

Read and process structured data from CSV or JSON files.

Daily Task and Evidence

Task Website: https://www.kqeannouncements.xyz/

Learning Outcomes

Participants were introduced to data loading, cleaning, transformation, analysis, and visualization, along with file handling and API concepts.

SHAIVIKA
GROUPS

DAY 3 — MACHINE LEARNING FUNDAMENTALS

Training Date: 30/09/2026

Topic: Machine Learning and Predictive Modeling

Daily Task Link: https://www.kqeannouncements.xyz/

Session Overview

The third day introduced machine learning concepts and the workflow involved in preparing data, training models, generating predictions, and evaluating performance.

Topics Covered

- Introduction to Artificial Intelligence
- Machine learning fundamentals
- Supervised and unsupervised learning
- Reinforcement learning overview
- Datasets, features, and labels
- Training and testing datasets
- Data preparation
- Introduction to Scikit-learn
- Linear regression
- Logistic regression
- Decision trees and random forests
- Classification and regression
- Model prediction
- Model evaluation metrics

Practical Exercises

Exercise 1: House Price Prediction

Explore a regression workflow using a suitable property dataset.

Exercise 2: Student Success Prediction

Explore a classification workflow using an appropriate dataset and a clearly defined target.

Exercise 3: Algorithm Comparison

Compare selected models and examine their performance using suitable evaluation metrics.

SHAIVIKA GROUPS

Daily Task and Evidence

Task Website: https://www.kqeannouncements.xyz/

Learning Outcomes

Participants were introduced to the machine learning workflow, including data preparation, model training, prediction, and evaluation.

Include model performance figures only if they were actually measured.

SHAIVIKA
GROUPS

DAY 4 — GENERATIVE AI AND PROMPT ENGINEERING

Training Date: 01/10/2026

Topic: Generative AI, Large Language Models, and API Integration

Daily Task Link: https://www.kqeannouncements.xyz/

Session Overview

The fourth day introduced Generative AI and large language models, with an emphasis on prompt design, structured responses, and the concepts involved in integrating AI services into Python applications.

Topics Covered

- Introduction to Generative AI
- Large language models
- Tokens and context windows
- Prompt engineering
- Role-based prompting
- Zero-shot and few-shot prompting
- Structured output prompting
- Context and output formatting
- Prompt templates
- AI API fundamentals
- API keys and environment variables
- Requests and responses
- Error handling
- Conversation history
- Responsible use of AI-generated content

Practical Exercises

Exercise 1: AI Assistant

Design prompts for an assistant that responds to user questions.

Exercise 2: Resume Analyzer

Explore a workflow for generating structured feedback from resume text.

SHAIVIKA GROUPS

Exercise 3: Study Assistant

Create prompts for explanations, summaries, and practice questions.

Exercise 4: Interview Coach

Develop prompts for interview questions and structured practice feedback.

Daily Task and Evidence

Task Website: https://www.kqeannouncements.xyz/

Learning Outcomes

Participants were introduced to prompt engineering, structured AI outputs, and the basic concepts involved in API-based AI integration.

SHAIVIKA
GROUPS

DAY 5 — AI APPLICATION DEVELOPMENT AND DEPLOYMENT

Training Date: 02/10/2026

Topic: Building Interactive AI Applications

Daily Task Link: https://www.kqeannouncements.xyz/

Session Overview

The fifth day focused on application development concepts, connecting Python functionality to interactive interfaces, organizing project files, and understanding version control and deployment preparation.

Topics Covered

- Introduction to Streamlit
- Interactive application interfaces
- Text inputs and buttons
- File uploads
- Sidebars, tables, and charts
- Application architecture
- AI API integration concepts
- Environment variables and .env files
- Secure API key handling
- Git fundamentals
- GitHub repositories
- README documentation
- requirements.txt
- Deployment options
- Application testing and debugging

Practical Project Options

- AI Resume Analyzer
- Study Buddy
- Interview Coach
- Expense Advisor

Document the project that was actually developed or demonstrated.

SHAIVIKA GROUPS

Daily Task and Evidence

Task Website: https://www.kqeannouncements.xyz/

Learning Outcomes

Participants were introduced to interactive Python application development, project organization, version control, configuration management, and deployment concepts.

9. DAILY TASK LINKS AND SUBMISSION SUMMARY

The following table consolidates the task website and submission evidence associated with the five-day training program.

Task Website

https://www.kqeannouncements.xyz/

Day-Wise Task Register

Day	Training Topic	Task Link	Submission Status
Day 1	Python Fundamentals	https://www.kqeannouncements.xyz/	29/09/2026
Day 2	Data Analysis and Automation	https://www.kqeannouncements.xyz/	30/09/2026
Day 3	Machine Learning	https://www.kqeannouncements.xyz/	01/10/2026
Day 4	Generative AI	https://www.kqeannouncements.xyz/	02/10/2026
Day 5	AI Application Development	https://www.kqeannouncements.xyz/	03/10/2026

Submission Evidence

For each day, attach the available supporting material:

- Screenshot of the assigned task
- Screenshot of the task submission or completion status
- Source code or notebook
- Program output or project screenshot
- Repository or deployment link, where applicable

Use individual task URLs instead of the homepage when separate daily task pages are available.

SHAVIKA GROUPS

10. PROJECT ACTIVITIES

Project Overview

The bootcamp curriculum included practical application ideas connecting Python programming, data analysis, machine learning, and Generative AI.

The following project descriptions should be retained only where they reflect actual activities, demonstrations, or completed work.

Project 1: Student Performance Analyzer

Objective: Analyze student marks and calculate performance summaries.

Technologies: Python and, optionally, Pandas.

Potential Features:

- Accept student marks
- Calculate totals and averages
- Apply result conditions
- Display performance summaries

Project Status: Completed

Video Recordings Evidence:

Python With AI Day 1:
https://webinar.gg/player?webinarId=cmukuusex00zcs60y6sfryr80

Python with AI Day 2 :
https://webinar.gg/player?webinarId=cmumftera05dfs60yzd7nxj82

Python with AI Day 3 :

Python with AI Day 5 :
https://webinar.gg/player?webinarId=cmuqt4yvg1ni0s60yw5l2jtu3

Project 2: Data Analysis Dashboard

Objective: Process a dataset and present useful summaries and visualizations.

Technologies: Python, Pandas, NumPy, and Matplotlib.

Potential Features:

- Load a dataset
- Clean and transform data
- Calculate summary statistics
- Create charts

Project Status: Completed

Project 3: Machine Learning Model

Objective: Demonstrate a machine learning workflow using an appropriate dataset.

Technologies: Python and Scikit-learn.

Potential Features:

- Prepare data
- Select features and target
- Train a model
- Generate predictions
- Evaluate model performance

Project Status: [Completed / Demonstrated / Proposed]

Evidence: [https://www.kqeannouncements.xyz/]

Project 4: AI-Powered Application

Objective: Explore the integration of an AI service into an interactive application.

Technologies: Python, Streamlit, and an AI API, if implemented.

SHAIVIKA GROUPS

11. LEARNING OUTCOMES

The five-day bootcamp was designed to introduce participants to programming, data analysis, machine learning, Generative AI, and application development.

11.1 Python Programming

- Understand basic Python syntax.
- Work with variables, collections, and functions.
- Apply conditional statements and loops.
- Handle files and structured data.

11.2 Data Analysis

- Load and manipulate datasets.
- Perform basic data cleaning.
- Use Pandas for data analysis.
- Create visualizations using Matplotlib.
- Understand introductory API workflows.

11.3 Machine Learning

- Explain basic machine learning concepts.
- Distinguish between regression and classification.
- Understand training and testing datasets.
- Describe model training and evaluation.

11.4 Generative AI

- Explain the basic role of large language models.
- Design structured prompts.
- Explore AI-powered application use cases.
- Understand introductory AI API integration.

11.5 Application Development

- Understand interactive application interfaces.
- Explore Streamlit.
- Organize source code and dependencies.
- Understand Git and GitHub fundamentals.
- Recognize deployment and configuration requirements.

SHAIVIKA GROUPS

Participant Feedback:
https://docs.google.com/spreadsheets/d/1HZUy9fgUT6Li_KMr9Sq87tHW3ml8fsVjDhsplOwjEK0/edit?gid=1941482685#gid=1941482685

These are intended learning outcomes. Report demonstrated skills and actual participant achievements accurately.

SHAIVIKA
GROUPS

15. CONCLUSION

The five-day Python with AI Bootcamp was structured to introduce participants to the progression from Python fundamentals to practical AI application development.

The curriculum covered programming concepts, data analysis, automation, machine learning, Generative AI, prompt engineering, API integration, interactive application development, version control, and deployment concepts.

The training approach emphasized connecting foundational programming knowledge with practical examples and potential real-world applications.

The daily task references and evidence sections provide a structure for documenting exercises, submissions, code, and project outputs associated with each training day.

This report serves as a professional record of the training curriculum, instructional approach, technical topics, practical activities, and supporting evidence. It can also support future technical training opportunities by demonstrating the trainer's subject coverage and approach to practical learning.

The final report should be supported by genuine task screenshots, source code, project evidence, relevant certificates, and actual assessment or feedback information wherever available.
